

Beyond e-Invoicing: Scale, Security, and Enterprise-Grade Support

The infrastructure that earns CFO, Tax, and IT sign-off –
before a mandate goes live, not after.

Why Three Functions Must Sign Off

e-Invoicing compliance is no longer a finance-only decision. By the time a mandate goes live, three functions need to have signed off: the CFO who owns the control architecture, the tax head who will defend the numbers in an audit, and the CIO who must guarantee the platform stays online during a real-time clearance cycle. What follows is a direct answer to each of those three perspectives.

1Bn+

e-invoicing transactions annually

5,000+

Enterprise clients globally

50+

Countries covered

99.9%

Platform uptime SLA

For the CFO

Architectural data isolation, human approval checkpoints, and immutable audit trails — a control layer that holds up under board scrutiny.

For the Tax Head

Continuous books-to-authority reconciliation and audit-ready evidence — built for real-time enforcement, not quarterly filing.

For the IT & CIO

99.9% uptime SLA, sovereign data residency per jurisdiction, and independently audited security — ISO 27001, SOC 2 Type II.

"A consolidated global compliance platform — one contract, one dashboard, one SLA to hold — gives the CFO a single point of accountability."

Why consolidation is the CFO's strongest risk move

The Architecture Decision

Three things that should be architecturally true of any platform you select – not contractual promises, but structural facts you can verify.

01 Your data is yours alone

Tenant isolation must be structural, not a configuration toggle – your compliance data, GL records, and notice history never mix with another company's data.

02 It meets the standards your auditors already recognise

SOC 2 Type II certified and ISO 27001 compliant – the same bar your bank and your Big 4 auditor hold themselves to.

03 Nothing reaches the tax authority without a human approving it

The AI drafts, validates, and flags – your people authorise. In several jurisdictions, this is a governance requirement.

THE COMPETITIVE ADVANTAGE

The CFOs who look back on 2026–2030 with confidence are not the ones who raced to compliance – they're the ones who built compliance infrastructure that became a control layer, an audit defence capability, and a data asset.

ClearTax is built for that standard.

Over a billion transactions annually. 5,000+ enterprises across 50+ countries. SOC 2 Type II and ISO 27001 independently audited. In-region teams in every market we operate.
