Automation Tools for ClearTax

Automating the way we create

Growing teams come with growing responsibilities

THE PROBLEM

As a growing company, each teammate manages multiple responsibilities.

To achieve the desired output, we often need to coordinate with and rely on one another. While collaboration is important, it can sometimes lead to delays — the person you depend on may also be handling multiple priorities, which can slow down your work, especially when something needs to be published quickly.

SO, WE BUILT AUTOMATION TOOLS

We created tools that can automate much of this work, reduce the time required to complete it, and hopefully take over more repetitive tasks in the future.

What can we automate today?

Ads

Websites

Assets

Decks

We can currently automate the creation of each of these.

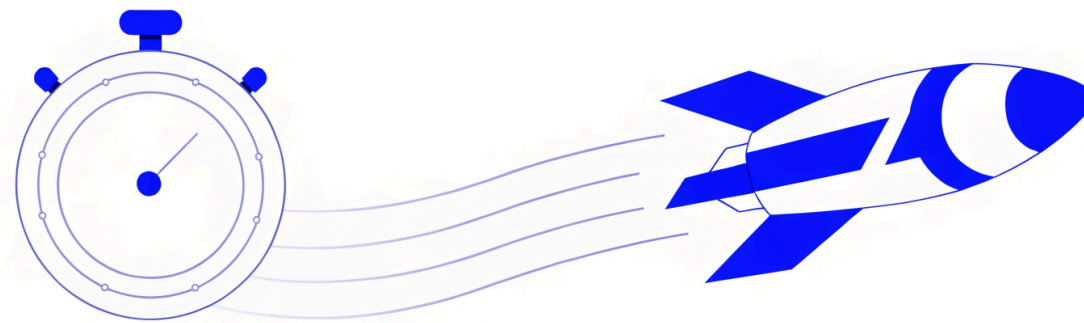

How can it help us?

Less workload, less waiting

Automation can help reduce our workload and cut down waiting time.

Ready to publish, immediately

It allows us to create designs immediately and generate outputs that are ready for publishing.

How can we use it?

WHERE WE ARE TODAY

Currently, each automation requires us to download a package and run it through Claude Code.

WHERE WE'RE HEADING

We are working towards making the process more user-friendly. The goal is to enable everyone on our team to use these automations directly through the Claude app instead of relying on the terminal, as I currently do.

OUR AUTOMATION OUTPUTS

Let's see it in action

I will demonstrate the actual outputs created using these automations directly from my computer.
