

The Fawtara Transmission Model

Oman uses PEPPOL's Decentralised Continuous Transaction Controls and Exchange (DCTCE) model – invoice data moves simultaneously to the OTA, the buyer, and the seller through accredited access points, not through one central portal.

Cleartax is certified as both Corner 2 (seller-side) and Corner 3 (buyer-side) under the Peppol 5-corner model – one integration handles outbound submission and inbound receipt.

What Your ERP Must Produce

Acceptable formats

Invoice format	XML or PDF/A-3 with embedded XML. Plain PDF is not compliant.
Standard	PINT-OM (Peppol International Invoice Oman), based on UBL 2.1.
Digital certificate	Required on every invoice for authenticity and integrity.
Transmission	Must go via an OTA-accredited Service Provider – direct submission isn't permitted.
Archival	10 years total: 5 in the live system, 5 in an electronic archive.

The data-field reality

296

Total PINT-OM fields

The full scope your ERP must produce per invoice.

220

Standard Peppol fields

Common across every Peppol jurisdiction globally.

36

Oman-specific (BTOM)

Custom fields – where the real mapping work sits.

221

Shared with UAE format

Already mapped if you operate in the UAE.

The Real Cost of Getting It Wrong

No separate e-invoicing penalty schedule exists yet – fines derive from Oman's VAT Law and apply per violation, not per reporting period. At high invoice volumes, exposure compounds fast.

Violation	Fine	Criminal consequence
Failure to issue a compliant e-invoice (wrong format, missing UUID/QR/signature, wrong VAT amount)	OMR 1,000–10,000	Imprisonment 2 months–1 year, or both
Failure to maintain or submit invoices, incl. refusing OTA record requests	OMR 1,000–10,000	Imprisonment 2 months–1 year, or both
Tax evasion / fraudulent reporting: fictitious invoices, manipulated values, false refund claims	OMR 5,000–20,000	Imprisonment 1–3 years, or both
Repeat offences – any of the above committed more than once	Fines doubled	Imprisonment extended up to half of the above maximum

Enforcement patterns from comparable mandates

- **KSA:** ZATCA cross-references VAT returns against e-invoice data; fines escalate SAR 1,000 → 5,000 → 10,000 → 40,000 for repeats.
- **India:** compliance notices rose from ~10,000/year in 2021 to ~200,000/year by 2024 as e-invoice data use deepened.
- **Oman:** the OTA will have the same analytical capability from day one – assume audit cross-referencing goes active within 12–18 months of go-live.

A 10–14 Week Path to Go-Live

A structured go-live runs across four phases, depending on ERP complexity, data quality, and how many legal entities are in scope.

Weeks 1–2

Phase I · Impact Assessment

Review current invoicing against the PINT-OM data dictionary, identify data gaps, and prepare the Business Requirements Document.

Weeks 3–6

Phase II · Development & Integration

Map internal data flows to the required XML structure, configure the ASP integration, and complete unit testing.

Weeks 7–8

Phase III · UAT & Change Management

Execute test scenarios against the OTA test environment, train stakeholder teams, and obtain sign-offs.

Weeks 9–10+

Phase IV · Go-Live & Hyper-Care

Move to production, monitor acceptance rates, resolve validation failures, and transition to steady-state operations.

Organisations that have already integrated for the UAE or KSA typically cut this timeline by 30–60%, thanks to reusable ERP connectors and shared field mappings.

Key Takeaways for CFOs and Tax Leaders

- ✓ **Confirm your phase of entry.** Phase 1's 150 large taxpayers face an immediate go-live; Phase 2 enterprises have 8 months, but the first 10–14 weeks must start now.
- ✓ **Run a data-gap assessment** against PINT-OM's 296 fields, focusing effort on the 36 Oman-specific BTOM extensions.
- ✓ **Assess your supplier base.** Suppliers must issue compliant e-invoices too – onboarding delays are the most common cause of missed mandates.
- ✓ **Evaluate ASPs on regulatory depth,** not list price – weigh maintenance cost, change-management burden, and multi-country coverage.
- ✓ **Operating across the GCC?** Choose one platform that covers every mandate through a single integration.

Oman's e-invoicing mandate isn't a documentation exercise – it's the foundation of the OTA's future audit and analytics capability.
