

What can we currently automate and put into real use?

Ads

Websites

Assets

Decks

We can currently automate the creation of each of these – ready for real use today.

How can it help us?

Less workload, less waiting

Automation can help reduce our workload and cut down waiting time.

Ready to publish, immediately

It lets us create designs immediately and produce outputs that are ready for publishing.

How can we use it?

TODAY

Every automation requires downloading a package and running it through Claude Code.

WHAT WE'RE BUILDING TOWARD

Making the process more user-friendly, so everyone on the team can use these automations directly through the Claude app – instead of working through the terminal, as I currently do.

OUR OUTPUT THROUGH THESE AUTOMATIONS

Live demo

Outputs will be shown directly on screen during this presentation.
